

Education

University of Washington, Data Science and Statistics, 2018 - 2019. GPA: 3.97

Relevant Courses: CSE 143 Computer Programming II, INFO 201 Technical Foundation, CSE 154: Web Programming, CSE 416 Introduction to Machine Learning, CSE 414 Introduction to Database Systems

University of Maryland, Computer Science: Data Science, 2020-2022. GPA: 4.0

Relevant Courses: CMSC 132 Object Oriented Programming II, CMSC 250 Discrete Structures, CMSC 216 Intro to Computer Systems, CMSC 351 Algorithms

Awards and Competitions

AIVIVN Sentiment Analysis Competition

Spring 2019

- Design a text classification system for positive v.s negative product reviews (in Vietnamese)
- Models: word2vec + weighted average of (hierarchical) self-attention neural network, residual network.
- **Final Result: 1st Place in Public Leaderboard (F1: 0.90087) and Private Leaderboard (F1: 0.90012)**
- GitHub Repository: https://github.com/petrpan26/Aivivn_1

Emotion Recognition Competition 2019

Fall 2019

- Design a system to classify the emotion of the speaker from raw audio data with convolutional neural network.
- **Result: 8th place in the first round, invited to present in the second round.**
- GitHub Repository: <https://github.com/nhatsmrt/erc>

Experience

Software Engineering Intern at Verta.AI

Summer 2020

- Responsible for building a *clean, functional, and type-safe* Scala client for Verta.AI's ModelDB V2
- Allows for reproducible machine learning with a Git-like versioning API for model hyperparameters, training metrics, and data
- Integrate with Amazon S3 for dataset storage and managing

Personal Projects

Neural Network Toolbox

Summer 2019

- Implement common deep learning procedures and papers using PyTorch for quick prototyping and model developing.
- GitHub Repository: <https://github.com/nhatsmrt/nn-toolbox>
- Documentation: <https://nhatsmrt.github.io/nn-toolbox/>

Arbitrary Style Transfer

Summer 2019

- Given an arbitrary content photo and a piece of artwork, transfer the style of the artwork to the photo.
- Based on Huang and Belongie's paper "Arbitrary Style Transfer in Real-time with Adaptive Instance Normalization"
- Implemented using PyTorch and my toolbox (see above).
- GitHub Repository: <https://github.com/nhatsmrt/torch-styletransfer>

Coding Platform

Winter 2020

- A platform to practice solving algorithmic questions and host contests.
- Technology stack: Judge0 for evaluation. Django REST Framework (Backend); React (Frontend). Deployed on Heroku
- Website: <http://codingplatform-cp.herokuapp.com/>

Data Collection for Food Desert Prediction Research Project at the University of Maryland

Spring 2020

- Web scraping (selenium, beautifulsoup4) for food data; Overpass and Nominatim API for geolocation data
- Speed up API calls, geometric queries, etc. **up to 3-6 times** with multiprocessing and spatial indexing (geopandas + rtree)

Skills

Proficient With

1. *Java (4 years):* Object Oriented Programming Design Patterns, JUnit Unit Testing, Multithreading and Concurrency
2. *Python (4 years):* Data Science, Machine Learning, Deep Learning. Packages and tools proficient:
 - scipy, statsmodels, numpy, pandas, geopandas, matplotlib, scikit-learn, pytorch, keras, Google Colab
3. *Scala (1 year):* Functional Programming Principles and Design Patterns. ScalaTest Behavior-Driven Testing.
4. *Relational DMBS and SQL*

Familiar With:

1. *Full Stack Web Development:* Server-side with Django; Client-side with HTML, CSS, JavaScript, ReactJS
2. *Other Technologies:* R (dplyr, tidyr, ggplot2, shiny); C, gdb, valgrind; Unix, emacs; Spark, AsteriskDB and SQL++; AWS S3
3. *Other CS and SWE Skills:* Agile Project Management via Jira; Software Versioning Control with Git and GitHub
